

# RST Whois API

**REAL-TIME. UNIFIED. READY-TO-USE**

**One unified format for any available WHOIS data**

- Ready-to-use unified JSON
- Can be used through API from any security tool:
  - SIEM
  - SOAR
  - Anti-Spam
  - Anti-Fraud etc

When investigating a suspected incident and needing to acquire detailed domain data or verify the domain's reliability, such as its lifetime and registration information, for anti-fraud or anti-spam solutions in an automated manner, there is now a unified format for WHOIS responses that provides all the required information on demand.

RST Cloud offers a unified Whois API service that delivers normalized data from registrars worldwide in a simple JSON format, allowing for an almost unlimited request frequency rate.

#### KEY BENEFITS:

- Comprehensive **unified API** which you can use from any platform, system or security tool
- Real-time whois data for any domain in **ready-to-use unified format**
- **Flexible pricing policy** with low entry
- **One entry point** to multiple WHOIS servers

## Key usage

- Phishing investigations
- SPAM investigations and e-mail security
- Tracking domain registration information and checking domain name availability
- Researching web infrastructure, locating geo positions
- FRAUD detection
